Permanent Make Up

Permanent makeup is a medically developed procedure that places tiny dots of coloured mineral pigment beneath the top layer of the skin. Feather light strokes and custom blending enable the natural enhancement of eyebrows (to correct sparseness), eyes (to add natural looking definition), and lips (to add asymmetry and enlarge appearance of thin lips). This service is ideal for active persons, those needing feature correction, people with allergies to makeup, athletes, alopecia sufferers, vision impaired or those who want the beauty without the work.

Services	Reg	VIP
